DETAILED ACTION

Drawings

1. The subject matter of this application requires illustration by a drawing to facilitate understanding of the invention. Applicant is required to furnish a drawing under 37 CFR 1.81(a). No new matter may be introduced in the required drawing. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d).

Specification

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet *within the range of 50 to 150 words*. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In regards to the claims, it is unclear what Applicant is attempting to claim. In claim 1, the terms “one side”, “the other side”, “last opening” are confusing. Examiner cannot follow applicant’s steps. Where are these sides? On the rope halves, on the strands? Further, how does one determine which opening is the “last opening”? One of ordinary skill in the art would not be capable of replicating the invention without undue experimentation. Likewise, the dependent claims are confusing since Examiner cannot follow the flow of the method, and the resultant rope.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-6, as best understood, are rejected under 35 U.S.C. 102(b) as being anticipated by Edwards (6422118).

Edwards teaches a method of splicing an endless rope comprising splitting, separating ends into groups of strands, one group being no more than one more than the other, and tucking several times (Figures 1-5). Edwards also teaches the resultant spliced rope.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Thomson (4191009), Bech (4058049), Black (3934397), Gathman (3017739), Joy et al (2943434), and Peterson (2482204) all teach what is well known in the splicing rope art.
